

## Problem Statement

*Route 101 Highway produces unsafe and hostile conditions for community users caused primarily by the speed and volume of traffic contributing to noise and water pollution. There is an imbalance between the use of the highway and community needs including town emergency services and other town facilities, clearly defined pedestrian amenities, appropriate land use, preservation of the environmental and historical character of the Dublin Village.*

*The extreme topography, weather, and the narrowness of the highway corridor are design constraints.*
